

ComEd - Community of the Future Metrics

Greene Economics is assisting ComEd/Exelon in evaluating the success of Community of the Future initiative by developing a meaningful set of metrics that will foster the continued development of smart grid and advanced technologies. The team is working iteratively with community stakeholders to establish the initial parameters and concepts most important to the Community of the Future programs. Next, the team will formalize metrics that will ensure the long lasting and completeness of the indicators as set of tools for investment evaluation. The work will culminate in application of the metrics to Community of the Future projects through 2021. All of the information including the evaluation will be compiled into one large final report and a shorter whitepaper suitable for publication. The team will also develop several presentations to be used to communicate with stakeholders throughout the iterative process.

Greene Economics is developing a meaningful set of metrics to evaluate development of smart grid and advanced technologies for ComEd/Exelon Community of the Future projects.
